

IMMEDIATE RELEASE:

**CODIAN® EXTENDS INNOVATIVE VIDEO CONFERENCING
INFRASTRUCTURE WITH COMPREHENSIVE MANAGEMENT SUITE**

**Codian Announces Codian Management Platform and Sets New Standards in
Video Conferencing Management**

LAS VEGAS, NV – May 23, 2007 – Codian®, the fastest growing voice and video communications infrastructure company, announced today the Codian Management Platform™, a new suite of products that simplifies for users the management, control and resourcing of their video conferences.

The Codian Management Platform is a scalable, reliable suite of management applications that harnesses the power of Codian's video conferencing infrastructure solutions. It delivers all major aspects of video conferencing management including provisioning, monitoring, schedule and control.

At INTEROP Las Vegas, Codian will demonstrate the first in this new suite of products, Codian Director and Codian Scheduler in its Booth #1282.

Codian Management Platform – Scheduler

Codian Scheduler is one of the most scalable products of its type on the market. It offers users the power to control all Codian infrastructure products and any endpoints on their network, making the best use of all conferencing resources including bandwidth. In doing so, users are guaranteed a reliable and consistent service with the best available visual and audio quality. Codian Scheduler offers multiple levels of access to administrators, allowing them to delegate the creation of conferences or levels of access to their users. A customizable interface offers users the choice of an embedded web-based form or calendar, or an email client to provide advanced scheduling of all video conferences in an organisation. Codian Scheduler also offers the ability to control multiple Codian MCUs and IP VCR conference recorders, with unlimited endpoints and users, as well as automatic handling of multiple time-zones and languages.

Codian Scheduler, as a hosted service, has been piloted by a major service provider – AARNet, Australia's Research and Education Network. AARNet provides Internet services to Australia's education and research communities and their global partners. AARNet, using Codian Scheduler, will offer a hosted video conferencing service that relies upon Codian's MCUs, as a way to deliver a management platform and excellent visual and audio quality.

"We have an increasing demand for video conferencing, but the diversity of equipment deployed by our clients has significant implications for the provision of a hosted [video conferencing] service. To get this off the ground, we needed to establish MCU port sharing, improve interoperability throughout the 37 universities, and of course, offer an easy-to-use, secure and accessible online booking system," said James Sankar, Director, Applications and Services at AARNet. "Together with Codian we have an interoperable environment, the Codian MCUs are endpoint

agnostic, so we can provide a completely seamless service. With the Codian Management Platform we will be able to decentralise the scheduling of conferences, manage ad hoc conferences better and optimise all available MCU resources throughout the community. This solution is being trialled on a larger scale with our customers at Australian universities, with the aim of enabling us to deliver a more comprehensive, and totally reliable video conferencing service that actually gives users the best visual and audio quality available at any given time, via an easy to use and navigate interface.”

Codian Management Platform - Director

The Codian Director offers real-time, large-scale, video conference control and monitoring, and is specifically designed to allow simple and scalable creation of video conferences, throughout an organisation and across business communities. It is ideal for enterprises, service providers and organisations that run simultaneous conferences across a number of conference units. The real-time interface is easy-to-use and intuitive, to allow administrators and users to spot and resolve any potential performance problems immediately. A drag-and-drop feature allows users to enter conferences on-the-fly, and a single view allows administrators to manage multiple conferences.

“The Codian Management Platform is a solid addition to the Company’s existing line of conferencing infrastructure products,” commented Ira Weinstein, Senior Analyst and Partner at Wainhouse Research. “By centralizing the monitoring and management of the video conferencing environment within a single user interface, Codian has made it that much easier for enterprises to provide their users with a high performance and highly reliable video conferencing experience.”

About Codian - www.codian.com

Codian is the fastest growing voice and visual communications company in the world. With a rapidly growing global customer base, Codian is renowned for delivering quality customer service and satisfaction. Codian solutions offer unrivalled reliability and ease-of-use, and are proven to provide the best available voice and video quality for conferencing, throughout an enterprise; in the boardroom, on the move and on the desktop.
